DEOKHYUN AHN

Ph.D. Candidate, Brain & Cognitive Engineering

+82 10 3733 3254 | dhan@kist.re.kr | dhahn@korea.ac.kr

deo-ahn.github.io | LinkedIn | Google Scholar | Seoul, Republic of Korea

Expected graduation: August 2027 | Available for employment from March 2027

RESEARCH INTERESTS

Reliable and efficient video understanding for social good.

Research for social good has always been my first priority, and it will continue to guide my work. I am a Ph.D. candidate in Brain & Cognitive Engineering at Korea University and a student researcher at KIST AI·Robotics.

My early work on sensing applications, including an ultrasonic SLAM helmet for firefighters and indoor drone tracking, shaped my commitment to dependable systems for real-world needs. I now study reliable and efficient video understanding: identifying anomalous behavior, understanding its temporal context, and explaining it with visual evidence.

My work connects video anomaly detection and understanding, adaptive video sampling, action recognition, and vision-language models (VLMs). Through public-safety research at KIST, I work on contextual anomaly detection and behavior analysis for real-world surveillance video.

Recent work includes BUSTER for VLM-guided anomaly detection with adaptive sampling, Where and What for contextual anomaly detection, and Look Closer for action-guided proficiency estimation.

Current focus: why vision-language models hallucinate in video anomaly understanding, and how selective visual verification can make their explanations more faithful.

Research keywords: Video understanding; Video anomaly detection & understanding; Adaptive video sampling; Efficient vision-language models; VLM hallucination & reliability; Temporal & contextual reasoning; Action recognition & human motion analysis; Video surveillance & public safety.

EDUCATION

Mar. 2023 – Present — **Korea University** — Seoul, KR

Ph.D. Candidate, Brain & Cognitive Engineering

- Expected graduation: August 2027.
- Study contextual video understanding inspired by human cognitive processes.

Feb. 2020 – Aug. 2015 — **Kwangwoon University** — Seoul, KR

M.Eng. in Electronic Engineering, February 2020

B.Eng. in Electronic Engineering, August 2015

- Thesis: *A Study on Passive Target Tracking in Three-Dimensional Indoor Environment by Using Deep Neural Network*.
- Completed 19 months of mandatory military service.

RESEARCH & WORK EXPERIENCE

Jan. 2023 – Present | **Student Researcher** | Seoul, KR
KIST AI·Robotics Institute | Vision Intelligence Group

- Video anomaly understanding; Surveillance video; Vision language models.
- Develop public safety video systems spanning action recognition, contextual anomaly detection, and vision language models that explain anomalous behavior. [1] [2] [3] [4] [5]
- Developed research prototypes and integrated them into a real-world monitoring system.
- Served as frontend team lead for the monitoring system, contributing directly to implementation and coordinating the team's development work.

Jan. 2022 – Feb. 2023 | **Research Intern** | Seoul, KR
KIST AI·Robotics Institute | Vision Intelligence Group

- Began surveillance video research through urban public safety projects and national research programs.

Oct. 2021 – Dec. 2021 | **Researcher** | Sejong, KR
The Korea Transport Institute

- Contributed to autonomous bus development through SLAM, control center systems, policy research, and coordination.

RESEARCH GRANTS & PROJECTS

~$24M **Real-Time Intelligent Surveillance for Public Safety**
National R&D | Five year program
- MSIT & MOTIE; with Yonsei University and the Korean National Police Agency.
- Video anomaly detection that uses context across city scale CCTV control centers with about 1,000 cameras, validated in Anyang City.

~$9.5M **Mobile Platform for Active Safety Services**
Korean National Police Agency & MOTIE | Five year program
- Government research program using mobile platforms for proactive public safety services.

New initiative **Anomaly Detection in Correctional Facilities**
KIST AI·Robotics
- Detecting inmate anomalous behavior in custodial environments.

AWARDS & HONORS

Dec. 2025 **AIR Outstanding Research Award**
KIST AI·Robotics Institute
- In recognition of outstanding research achievements during 2025.

Feb. 2025 **Excellent Paper Award, Graduate School**
Korea University
- For outstanding research performance and publication of an excellent paper during doctoral studies.

Nov. 2024 **Outstanding Oral Presentation Award**
KIST Academia and Research Convergence Conference
- For the presentation "Multi-Aspect Contextual Dynamics for Anomaly Detection in Surveillance Videos."

Jul. 2021 **Division Commander's Commendation**
Capital Mechanized Infantry Division
- For a combat development proposal on reconnaissance drone AI improvement and acoustic detection using AI and big data.

TEACHING

Sep. – Dec. 2018 **Senior Capstone Project**
Teaching Assistant | Kwangwoon University | Instructor: Prof. Youngok Kim
- Assisted in managing and supporting the Capstone Design Project as a TA for 50+ students.

Mar. – Jun. 2017 **Computer Architecture**
Teaching Assistant | Kwangwoon University | Instructor: Prof. Youngok Kim
- Graded assignments and provided feedback for 30+ students with Q&A sessions.

TECHNICAL SKILLS

Programming	Python, C, Java, Git, Linux
Machine Learning	PyTorch, TensorFlow, Keras, NumPy, Pandas, Matplotlib
Sensors	Ultrasonic, Beacon, RF, Wi-Fi, 3-axis Accelerometer
Embedded & IoT	Raspberry Pi, Arduino

Updated October 2026
