01 Research Interests

Reliable and efficient video understanding for social good.

Research for social good has always been my first priority, and it will continue to guide my work. I am a Ph.D. candidate in Brain & Cognitive Engineering at Korea University and a student researcher at KIST AI·Robotics.

My early work on sensing applications, including an ultrasonic SLAM helmet for firefighters and indoor drone tracking, shaped my commitment to dependable systems for real-world needs. I now study reliable and efficient video understanding: identifying anomalous behavior, understanding its temporal context, and explaining it with visual evidence.

My work connects video anomaly detection and understanding, adaptive video sampling, action recognition, and vision-language models (VLMs). Through public-safety research at KIST, I work on contextual anomaly detection and behavior analysis for real-world surveillance video.

Recent work includes BUSTER for VLM-guided anomaly detection with adaptive sampling, Where and What for contextual anomaly detection, and Look Closer for action-guided proficiency estimation.

Current focus: why vision-language models hallucinate in video anomaly understanding, and how selective visual verification can make their explanations more faithful.

Video understanding | Video anomaly detection & understanding | Adaptive video sampling | Efficient vision-language models | VLM hallucination & reliability | Temporal & contextual reasoning | Action recognition & human motion analysis | Video surveillance & public safety

02 Education

Mar 2023 – Present
Seoul, KR

Ph.D. Candidate, Brain & Cognitive Engineering
Korea University

- Expected graduation: August 2027.
- Study contextual video understanding inspired by human cognitive processes.

Aug 2015 – Feb 2020
Seoul, KR

M.Eng., Electronic Engineering
Kwangwoon University

- Thesis: *A Study on Passive Target Tracking in Three-Dimensional Indoor Environment by Using Deep Neural Network*.
- Completed 19 months of mandatory military service.

Mar 2013 – Aug 2015
Seoul, KR

B.Eng., Electronic Engineering TRANSFER
Kwangwoon University

- Transferred in March 2013 from the National Institute for Lifelong Education after completing B.Eng. coursework in Computer Engineering from March 2011 to February 2013.

03 Research & Work Experience

Jan 2023 – Present
Seoul, KR

Student Researcher CURRENT

KIST AI·Robotics Institute · Vision Intelligence Group

Video anomaly understanding · Surveillance video · Vision language models

- Develop public safety video systems spanning action recognition, contextual anomaly detection, and vision language models that explain anomalous behavior. [1] [2] [3] [4] [5]

Jan 2022 – Feb 2023
Seoul, KR

Research Intern

KIST AI·Robotics Institute · Vision Intelligence Group

Began surveillance video research through urban public safety projects and national research programs.

Oct 2021 – Dec 2021
Sejong, KR

Researcher

The Korea Transport Institute

Contributed to autonomous bus development through SLAM, control center systems, policy research, and coordination.

04 Research Grants & Projects

~$24M
Five year program

Real-Time Intelligent Surveillance for Public Safety NATIONAL R&D

MSIT & MOTIE · with Yonsei University and the Korean National Police Agency

Video anomaly detection that uses context across city scale CCTV control centers with about 1,000 cameras, validated in Anyang City.

~$9.5M
Five year program

Mobile Platform for Active Safety Services

Korean National Police Agency & MOTIE

Government research program using mobile platforms for proactive public safety services.

New
initiative

Anomaly Detection in Correctional Facilities

KIST AI·Robotics

Detecting inmate anomalous behavior in custodial environments.

06 Awards & Honors

Dec 2025 — AIR Outstanding Research Award
KIST AI·Robotics Institute
> In recognition of outstanding research achievements during 2025.

Feb 2025 — Excellent Paper Award, Graduate School
Korea University
> For outstanding research performance and publication of an excellent paper during doctoral studies.

Nov 2024 — Outstanding Oral Presentation Award
KIST Academia and Research Convergence Conference
> For the presentation “Multi-Aspect Contextual Dynamics for Anomaly Detection in Surveillance Videos.”

Jul 2021 — Division Commander's Commendation
Capital Mechanized Infantry Division
> For a combat development proposal on reconnaissance drone AI improvement and acoustic detection using AI and big data.

07 Teaching

Sep – Dec 2018 — Senior Capstone Project
Kwangwoon University · Instructor: Prof. Youngok Kim
- Assisted in managing and supporting the Capstone Design Project as a TA for 50+ students.

Mar – Jun 2017 — Computer Architecture
Kwangwoon University · Instructor: Prof. Youngok Kim
- Graded assignments and provided feedback for 30+ students with Q&A sessions.

08 Technical Skills

Programming	Python C Java Git Linux
Machine Learning	PyTorch TensorFlow Keras NumPy Pandas Matplotlib
Sensors	Ultrasonic Beacon RF Wi-Fi 3-axis Accelerometer
Embedded & IoT	Raspberry Pi Arduino
